How to create effective and relevant content online

MYOGA @20201 BY NADAV AVNON

About Myoga

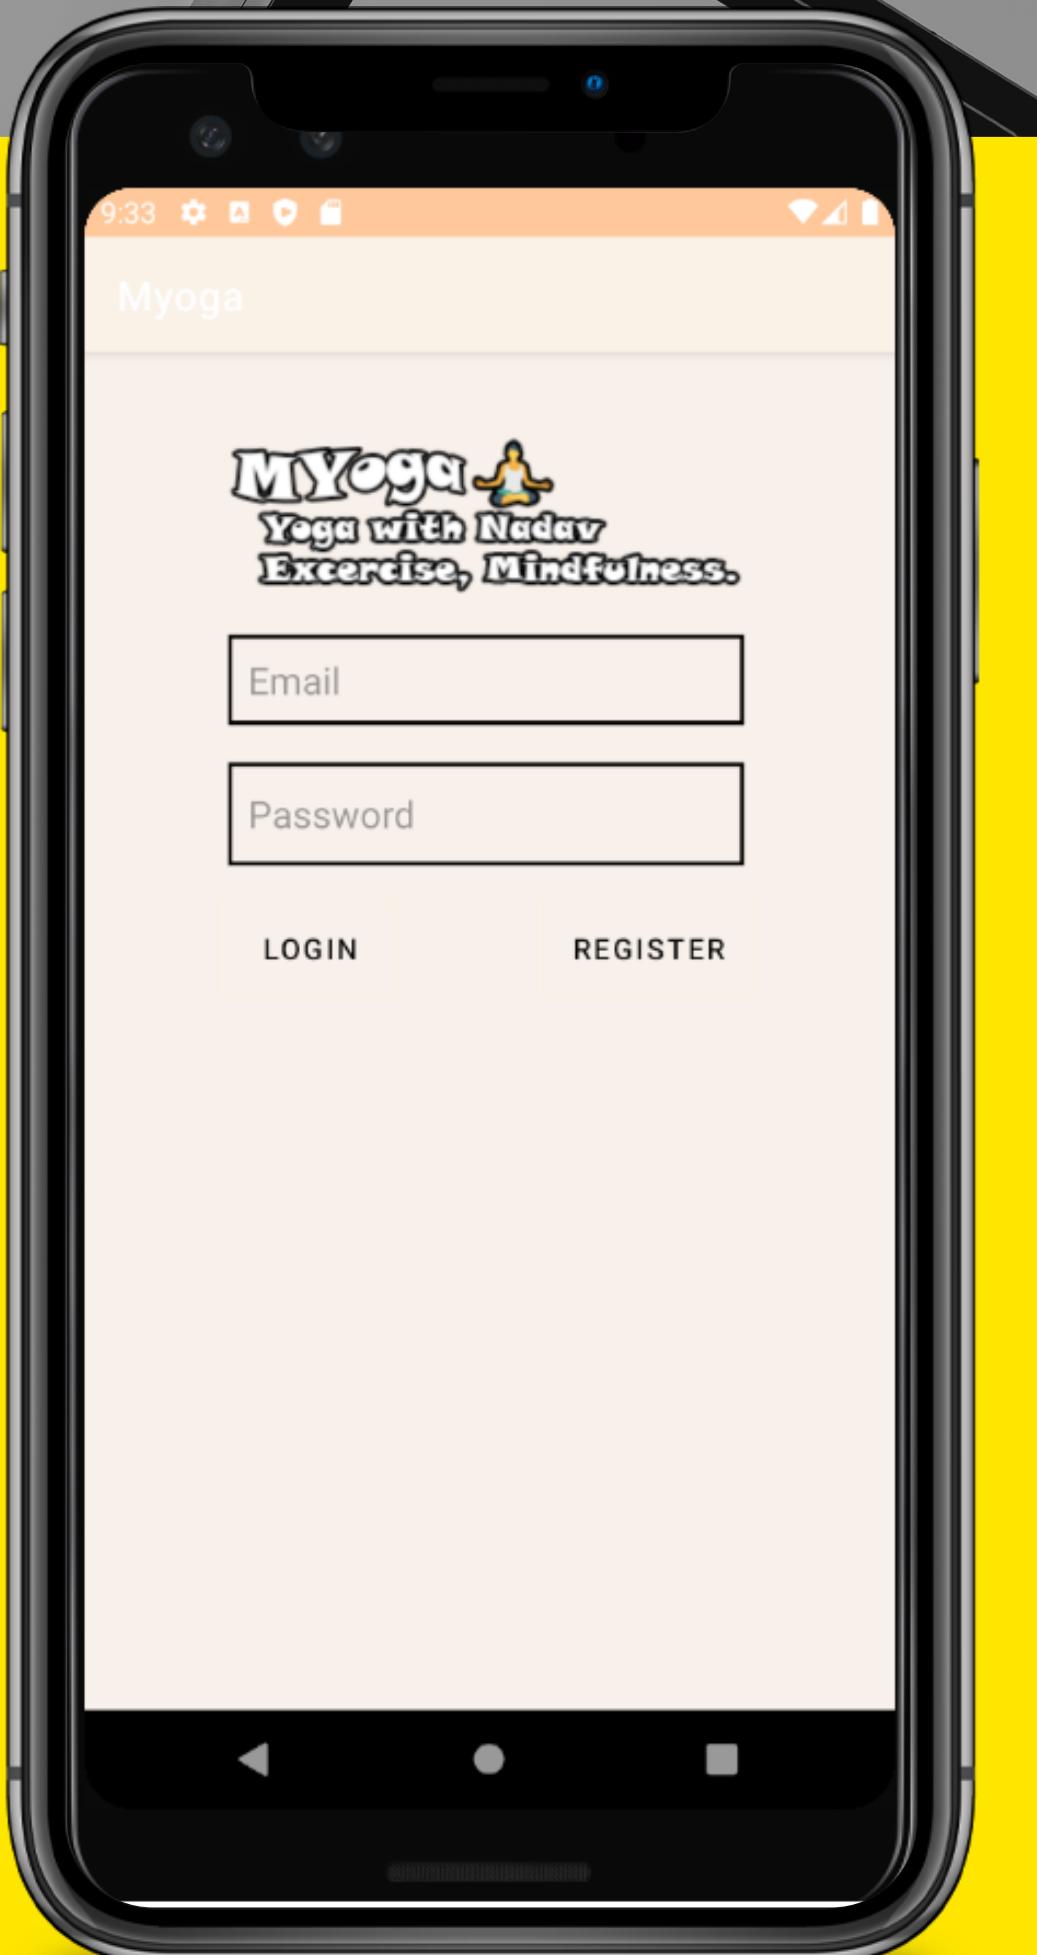

Myoga is an Application written in JAVA 8 developed as a final project for HackerU Android Module. Myoga is an information and content application with the niche of Yoga, Exercise and Mediation.

Myoga provides playable videos, playable audios, quotes, Great book recommendations and information about yoga in general.

To create a healthier, flexible and flowing body.. Let us help you on your journey towards self awareness and greatness, Myoga..

Login Page

Myoga Login page provides a safe login area that connects to our Firebase user-database with the options of registration and login ->

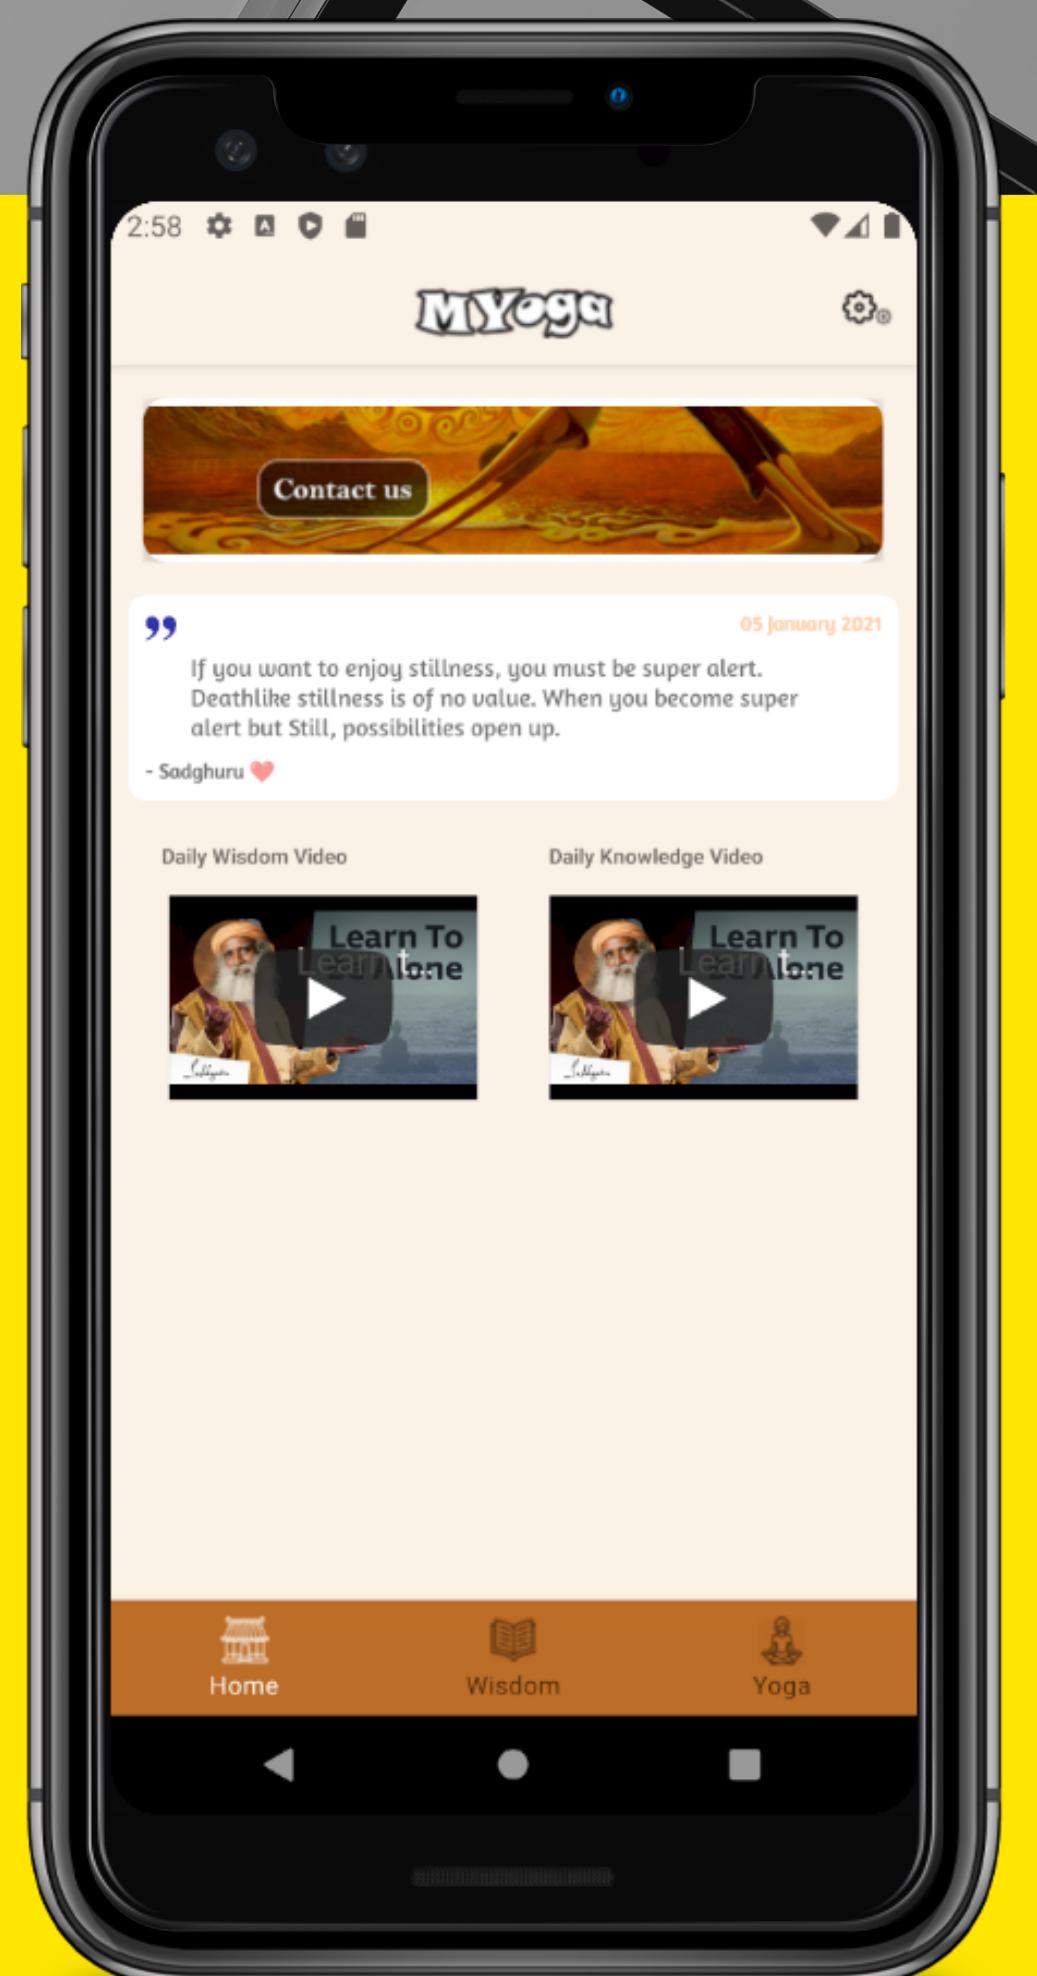

Home Page

Image Slideshow:

Myoga home page has a slideshow of 3 clickable images that open ip internet web-pages with a few url addresses provided from our Firebase Real-time database.

If the user has no internet connection, then clicking the image from the slideshow will notify the user about the missing connection.

*Note: Myoga has a netwrok observers which will automatically update UI if the user gets a good connection Daily Home Videos: After the slideshow we have a section of the Daily quote which changes daily and is taken from our Firebase Real-time database. And finally 2 daily updated videos with urls taken from our Database.

Wisdom Page

has a toolbar with 3 button options to move to one of the following pages:

Watching Page:

this page contains daily updated videos about yoga and lectures from awakened people around the globe.

Videos are provided by our Firebase Realtime Database and are presented in a RecyclerView.

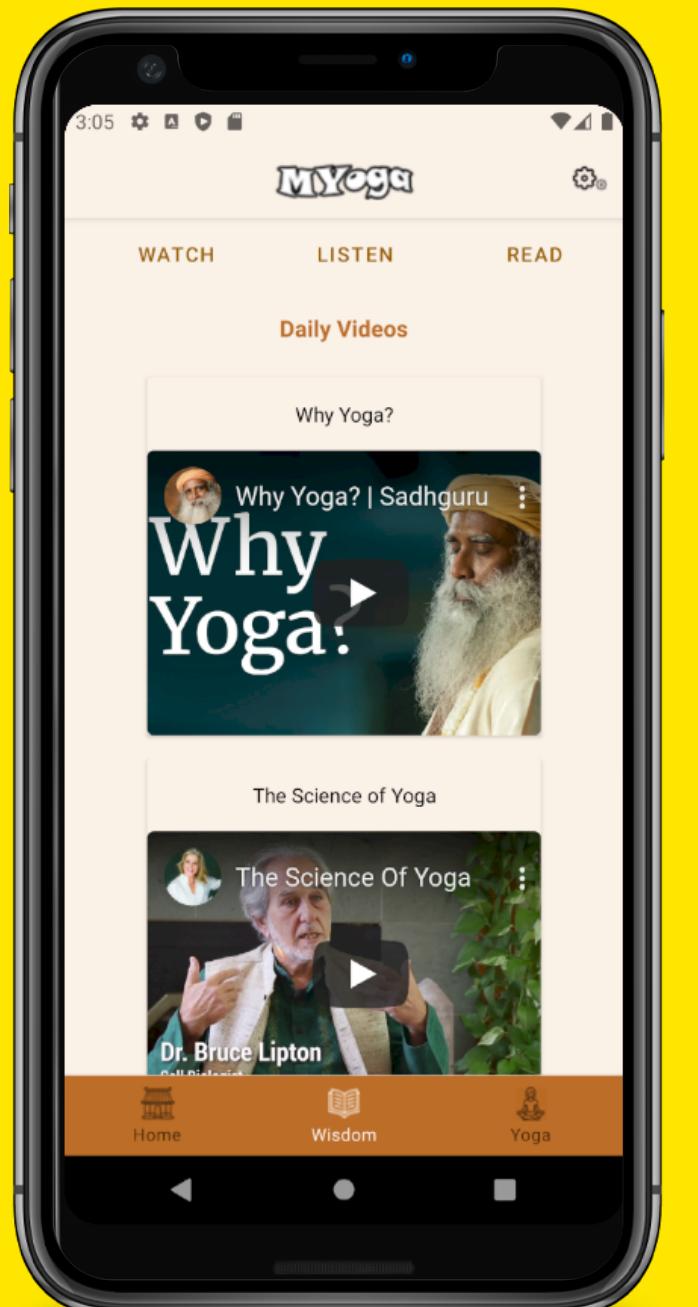

Audio Page:

This Page contains 3 Playable Audios that are also taken from our database and are changed daily. Reading Page:

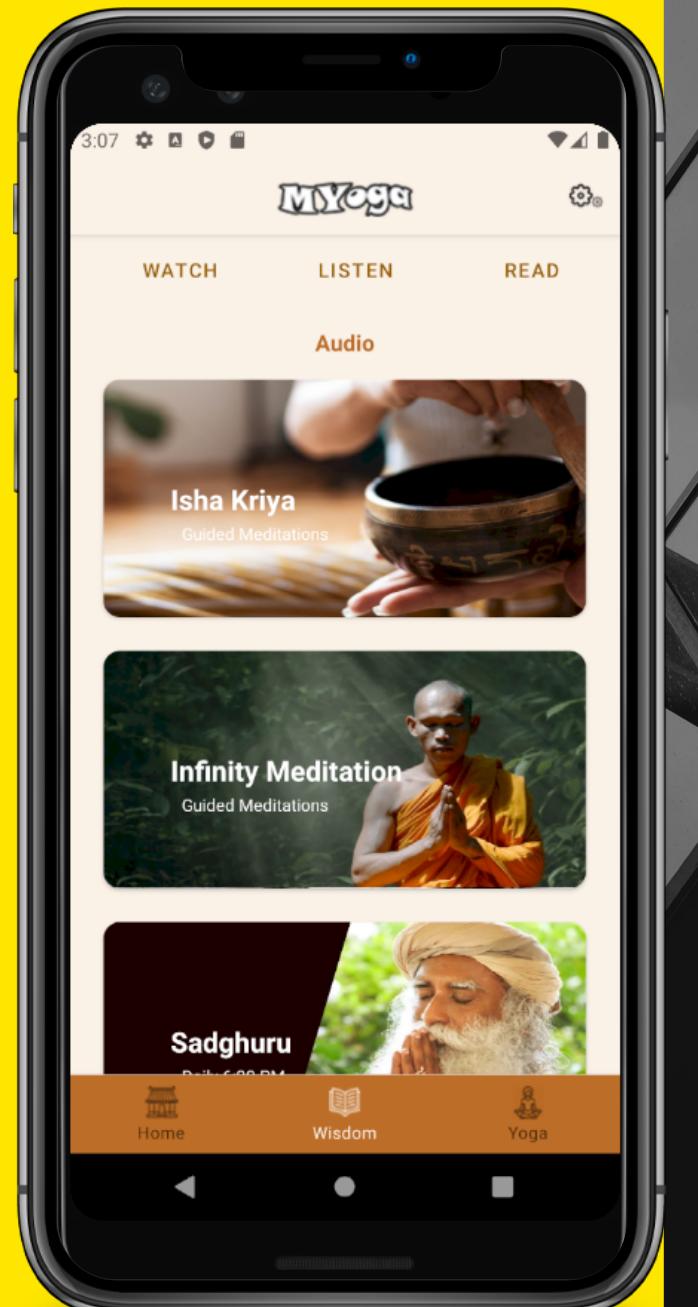

this page is a little different in the sense that it has a Recyclcer View with over 100 books that the user can add to his favorites, the books are provided by a RAW json file.

Note* Books can be added by the user to a favorites section which will be shown later on.
